- other technological equipment made from corrosion-proof steel
- consignment stock (place of sale) of MESSER technical gases
- drilling using diamond crowns of the original and proven technology by the HILTI company

Member of the Medicine-Pharmaceutical Cluster NANOMEDIC

The company **INTERO Chmelan s.r.o.** was established due to historical events by the separation from the formerly state company PMV Hradec Králové as a public business company in 1991. Thanks to its dynamic evolvement, development, use of the latest technology and use of the previous experience in the field, the company increased the number of employees from the original twelve to almost four times that number. On the basis of the demand, the settlement of the partners was approved, establishing in 1995 the company Intero s.r.o., which was focused on sale, brewery assembly and production of its own beer. The conditions for the public business companies set up by the state ceased eventually to conform and in 2000 the public business company Intero Chmelan a spol. sold its property and production instruments to the company INTERO Chmelan a spol., s.r.o.

Today, the company INTERO Chmelan s.r.o. is at the top of its field. The main aim of the company with certification ISO 9001:2001, ISO 14001, an ITI licence for manufacturing, assembly and reparation of pressure equipment, a welding certificate from TÜV and the Czech Welding Society, is to provide a high standard and top quality work. To meet these high requirements, a team of reliable and experienced workers is available with its own welding technologist. Based on the high quality of the work, the company got in touch and cooperation with numerous other companies, such as Alfa Laval Praha, Global Servis Chotěboř, APV Praha, VÚC Praha, CFT Morávek, which are among the very best in the food industry. The company has also successfully operated in the pharmaceutical industry, e.g. for the companies ContriPro and 4P System from which demanding contracts were obtained.

The task of the INTERO Chmelan a spol. company in the framework of the cluster is the project planning and manufacturing of biotechnological and chemical equipment and build-up of complete biotechnological and chemical-technological complexes that are necessary to provide the production in framework of the cluster.
