- Ambulatory plastic surgery
- Plastic surgery with hospitalisation
- Orthopaedics
- Stomatology
- Dermatovenerology

MUDr. Pavel Nožička

Member of the Medicine-Pharmaceutical Cluster NANOMEDIC

The clinic of Pavel Nožička, M.D., is part of a multidisciplinary medical facility that provides medical care in the schedule of one-day bed care. It has been performing this activity since 1995 and in 2000, the center was included into the pilot programme of the Central Insurance Company VZP ČR "ONE-DAY SURGERY".

Thanks to many years of experience, the facility offers the potential free of charge consultation to all medical institutions interested, so that they can reconstruct or establish their private medical facility in the schedule of one-day bed care, eventually an emergency room with the day clinic.

The association of the ambulatory physicians has existed since 1992 after delimitation of OÚNZ, initially as an organisation funded by the town, consequently, after accomplishment of privatisation in May 1995, as an integrated ambulatory facility with the day clinic. As the only facility in the Ústí nad Orlicí region, the center provides medical-preventive care in the field of surgery, plastic surgery, orthopaedics and anesthesiology in a one-day bed care clinic without a night service; from literature known as "ONE-DAY SURGERY" system.

The counseling activities in the field of development of new products utilisable in the fields of general surgery, plastic surgery, orthopaedics, dermatovenerology and anesthesiology and administration of clinical testing of newly developed products represent the main mission in frame of the cluster.
