The company **4P SYSTEM** supplies and in the framework of project implementations and orders also uses the components and machinery from prestigious suppliers and manufacturers of the machinery for field instrumentation; PC, PLC, DCS (operation systems) and electroinstallation materials, e.g. Endress+Hauser, Rockwell Automation, Honeywell, Siemens, Schneider Electric, Moeller and others. The components from these companies are further used for development of SW – PLC and for visualization processes. The order is completed in a complex way, from the project to the assembly and putting into operation. The company provides the complete operation of the order (own and also for the customer) from the beginning till the handover to the final user. Through its own efforts, it is also able to provide the calibration and the following calibrations or, as the case may be, validations (pressure, temperature, level, pH, O<sub>2</sub>, turbidity).

**Member of the Medicine-Pharmaceutical Cluster NANOMEDIC**

The **4P SYSTEM s.r.o.** is a purely Czech, dynamically developing company operating in the market since 1999, and in the present form since 2003. The long-term experience and knowledge of the employees make it possible to provide complex as well as partial services and supplies mainly in the field of industrial measurement, regulation, ASRTP and electrical services. One of the main objectives is the immediate reaction to the demands of the customers and individual solutions offered to meet their demands.

The satisfaction of the customers makes us sure that the company has set out in the right direction. An important value that the company can offer is the practical knowledge and experience from previously implemented orders mainly in the chemical, pharmaceutical and food industry. The company is able to carry out the validation of the operation system in the framework of the supplies; it also successfully implements the orders in areas with explosion hazards.

In 2005, the company 4P SYSTEM s.r.o. certified the quality control system according to ČSN EN ISO 9001/2001 through the accredited certification company TÜV CZ, Ltd and the certification was in the following years defended via control audit.

The mission of the company in the framework of the cluster comprises development, project planning, production and assembly of equipment for measurement, regulation and automation in biotechnological, chemical and pharmaceutical plants. The company 4P SYSTEM will provide the development of its own operation systems, both on HW and SW platforms.
