**Member of the Medicine-Pharmaceutical Cluster NANOMEDIC**

The company **SEDIUM RD** was established in 2006. SEDIUM RD is a biotechnological company focused on research, development and implementing of immunochemical methods for determination of food allergens, environmental xenobiotics and veterinary preparations in practice. Due to our scientific technological background we bring high quality products proved in the field onto the market.

In the sphere of development of kits for immunoanalysis, we cooperate above all with the Research Institute of Food Industry in Prague, the Veterinary Research Institute in Brno and the Czech Agriculture and Food Inspectorate.

The development, production and practical implementation of the new diagnostic kits applicable in monitoring of numerous parameters of the newly developed preparations in their interaction with the living organism and the environment represent the main mission of the SEDIUM RD company in the framework of the cluster.
