Products of the company:

In the workplace, the scientific information is obtained, processed and distributed, scientific publications are released, scientific reviews, standpoints and recommendations are provided as well as consultation and counselling activities.

Member of the Medicine-Pharmaceutical Cluster NANOMEDIC

Description of the company:

Research workplace of AV ČR. The objective of the main activities of the workplace is represented by the basic research of the structure, function and dynamics of the biological systems (biomolecules, cellular organelles, cells and cell populations) carried out using molecular biology, biophysics, biochemistry and bioinformatics approaches.

In the framework of the cluster, the mission of the laboratory of the institute is to study the behaviour of the cells under the influence of various biopolymers and their derivatives, interactions between the cells and the scaffolds, wound covers and carriers for the targeted distribution of the biologically active substances and monitoring of the changes in the phenotypic expression of the cells cultured in the implants under various conditions.
